

Mark 53/54 Series

Differential Back Pressure Regulators

The Jordan Mark 53 maintains a constant differential between the inlet pressure and the pressure loaded on top of the diaphragm. It can be used for both differential and remotely adjusted applications. The Mark 54 provides the same flow capacity as the Mark 53 but with less offset in controlled pressure due to larger diaphragm.

The valve is normally closed. The inlet pressure acts beneath the diaphragm and is opposed by the force of the adjusting spring plus the pressure of the loading fluid. As the inlet pressure overcomes the set point (the combined pressures on top of the diaphragm), the valve moves toward the open position, relieving the necessary pressure to maintain the set point.

FEATURES

- Mark 53/54 — maintains a constant differential between the inlet pressure and the pressure loaded to the top of the diaphragm.
- Sliding Gate Seats — all of Jordan Valve's differential regulators feature advanced sliding gate seat technology.
 - Straight-through flow for reduced turbulence and quiet operation
 - Short stroke for fast response and accurate regulation
 - Easily interchangeable Cv's
 - Tight Shutoff

SPECIFICATIONS

Sizes: (Note: 1/4" (DN8) & 3/8"(DN12) use 1/2"(DN15) body with reducer bushings)

- Mark 53/53HP: 1/4" (DN8) through 2" (DN50)
- Mark 54: 1/4" (DN8) through 3/4" (DN20)

End Connections:

- Threaded — FNPT, BSPT, BSPP
- ANSI Flanges — 150#, 300#
- DIN Flanges — PN10/16, PN25/40

Body Materials:

- Ductile Iron
- Bronze
- Carbon Steel — A216 WCB
- Stainless Steel — SA351 CF8M

Trim Materials:

- 303 SST — Standard on Ductile Iron, Bronze, or Carbon Steel valves
- 316SST — Standard on Stainless Steel valves

Seat Materials:

- Jorcote on SST – Standard
- Other materials available – Consult factory

SPECIFICATIONS (CONT'D)

Diaphragm Materials

- Stainless Steel - Standard (450°F (232°C) temp limit)
- Buna-Nitrile (200°F (93°C) temp limit)
- Viton (450°F (232°C) temp limit)
- Jorlon (450°F (232°C) temp limit)

Spring Housing Materials: Ductile Iron

Service: Steam, oil, gas, air, chemicals, and water

Shutoff: ANSI Class IV

Body Rating:

Note: Double bolting option is required to reach pressures indicated in parenthesis (). For temperatures below -20°F or above 650°F, consult factory

Note: To convert temperature to Celsius: subtract Fahrenheit temperature by 32, multiply result by 5, divide answer by 9, final answer to temperature in Celsius ((F-32)*5/9 = C). To convert PSI to BAR, divide by 14.5.

Maximum Dome Loading Pressure: the combined pressure of the spring setting (psig) and dome loading (psig) must not exceed the body rating.

Options:

- DB: Double bolting for higher pressure ratings
- C: Closing cap for adjusting screw
- B: Bleed valve on spring housing (available only with option C closing cap above)
- H: Handwheel and packing box
- F: Flow-through spring housing. Permits "in-oil-line" installation for fuel oil atomization and steam atomizing systems. Reduces the possibility of the oil asphaltting on top of the diaphragm
- D: Separated double diaphragm (prevents mixing fluids in case of ruptured diaphragm)
- HP: High pressure spring housing
- H: Handwheel and packing box

Differential Pressure Control Ranges, PSI (BAR)

Model	Size	Ranges in psi (bar)		
MK53	1/4" - 3/4" (DN8 - 20)	2-20 (0,14-1,39)	10-30 (0,69-2,07)	20-45 (1,38-3,10)
